Raghu Narayana

Bangalore, India | +91-6281048497 | raghupolisetty5@gmail.com | LinkedIn | GitHub: raghup2005

Education

Jain University — Bangalore, India
B.Tech in Computer Science Engineering; CGPA: 8.26/10 — Sept 2023 – May 2027

Work Experience

AI/ML Engineer Intern — Sept 2026 – Present
Impacto Digifin — On-site

- Building AI/ML solutions, translating business requirements into ML problem statements and technical specifications
- Building and maintaining backend services and APIs to support model deployment and data-driven decision-making
- Analyzing business data to identify patterns, supporting model development and stakeholder reporting

Software Development Intern — June 2026
AICTE Oasis Infobyte — Remote

- Built RESTful backend services using FastAPI with request validation, structured error handling, and JWT-based authentication, focusing on catching boundary conditions and failure cases before deployment
- Implemented and maintained MySQL and PostgreSQL databases, optimizing queries and enforcing data integrity checks to prevent inconsistencies across modules

Data Analytics Virtual Experience — April 2026
Deloitte – Virtual Experience Program — Remote

- Conducted data cleaning and exploratory data analysis (EDA) on business datasets, systematically identifying data quality issues, edge cases, and anomalies for simulated client scenarios
- Diagnosed and resolved data quality defects, including missing values, duplicate records, and inconsistent formatting, to produce analysis-ready, defect-free datasets

Projects

RouteIQ – Airline Market Intelligence Platform — github.com/raghup2005
FastAPI, XGBoost, Streamlit, PostgreSQL

- Built a full-stack airline analytics platform covering fare prediction, route analytics, competitor benchmarking, and pricing intelligence on 10,683 flight records
- Engineered features and trained an XGBoost regression model for ticket price prediction, achieving R-squared = 0.918 and MAE = Rs. 669 through iterative feature engineering and model evaluation
- Designed Streamlit dashboards backed by PostgreSQL data pipelines for visualization and reporting, wrote an automated pytest suite for API validation and edge cases, and deployed the project on Vercel

DocuLens – Multi-Modal RAG Document Chat — github.com/raghup2005
Python, LangChain, ChromaDB, Gemini API, Gradio

- Built a multi-modal RAG chatbot that answers questions grounded in document text, tables, and images, citing sources and avoiding hallucinated answers
- Designed an ingestion pipeline that splits documents into text, table, and image chunks, using Gemini's vision model to caption images for semantic search
- Built embedding, retrieval, and generation pipelines with LangChain and a ChromaDB vector store, served through a Gradio interface

Technical Skills

Languages & Scripting: Python, SQL, Python Scripting, HTML, CSS
Backend & APIs: FastAPI, RESTful API Design, JWT Authentication, Async Programming, SQLAlchemy
cloud streaming: AWS (EC2, S3, Lambda), Kafka, Flink, Event-Driven Systems, Streaming APIs, Telemetry Data
Databases: MySQL, PostgreSQL, SQL Query Optimization, Database Design
Testing & Tools: Unit Testing (pytest), Boundary Testing, Debugging, Git/GitHub, Docker, Vercel, SDLC
AI & ML: LLM APIs (OpenAI, Claude, Gemini), RAG, LangChain, AI Coding Assistants, Scikit-learn, XGBoost
Core CS: DSA (arrays, hash maps, trees, graphs), OOP, DBMS, Operating Systems, Networking, System Design

Certifications

Machine Learning – Udemy

Dynamic Programming Camp – AlgoUniversity

Data Structures and Performance – UC San Diego (Coursera)

Leadership & Extracurricular

Captain, Jain University Cricket Team – led team strategy, scheduling, and coordination for inter-college tournaments

Solved 100+ Data Structures & Algorithms (DSA) problems across arrays, linked lists, trees, and graphs on competitive coding platforms (actively expanding)
